Lab No: 08 – React Routing and Form Handling

CODE: <https://github.com/TALHA-089/Web-Lab-08.git>

Task 1:

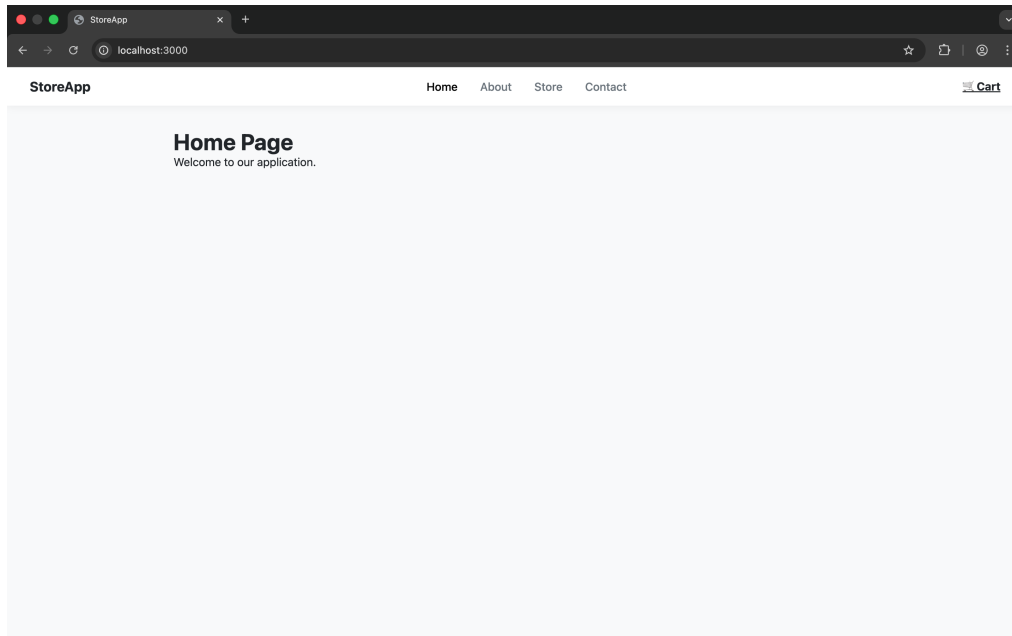

Figure 1. Home Page

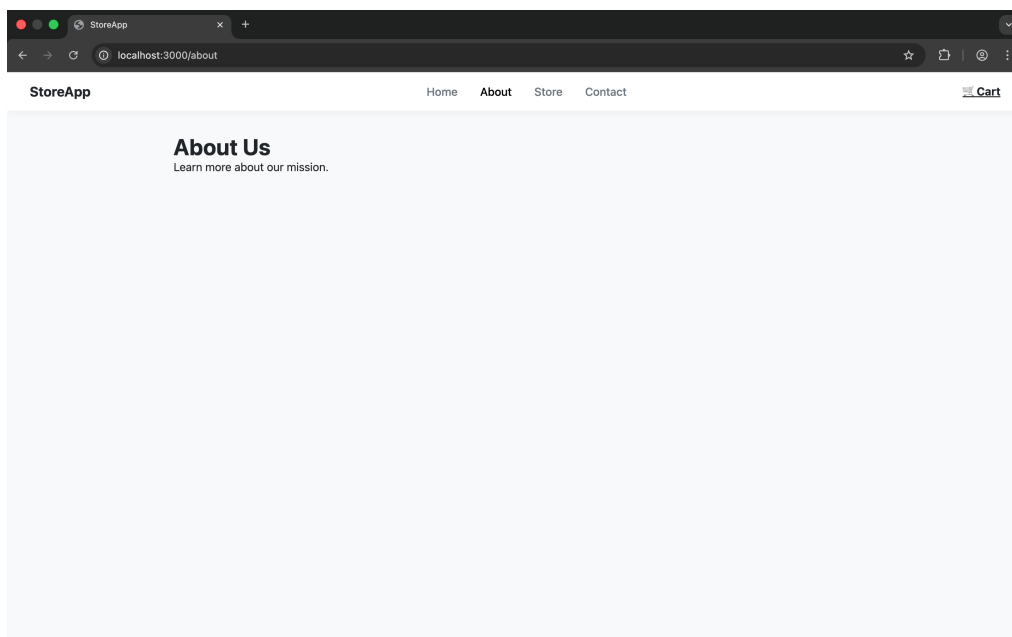

Figure 2. About Page

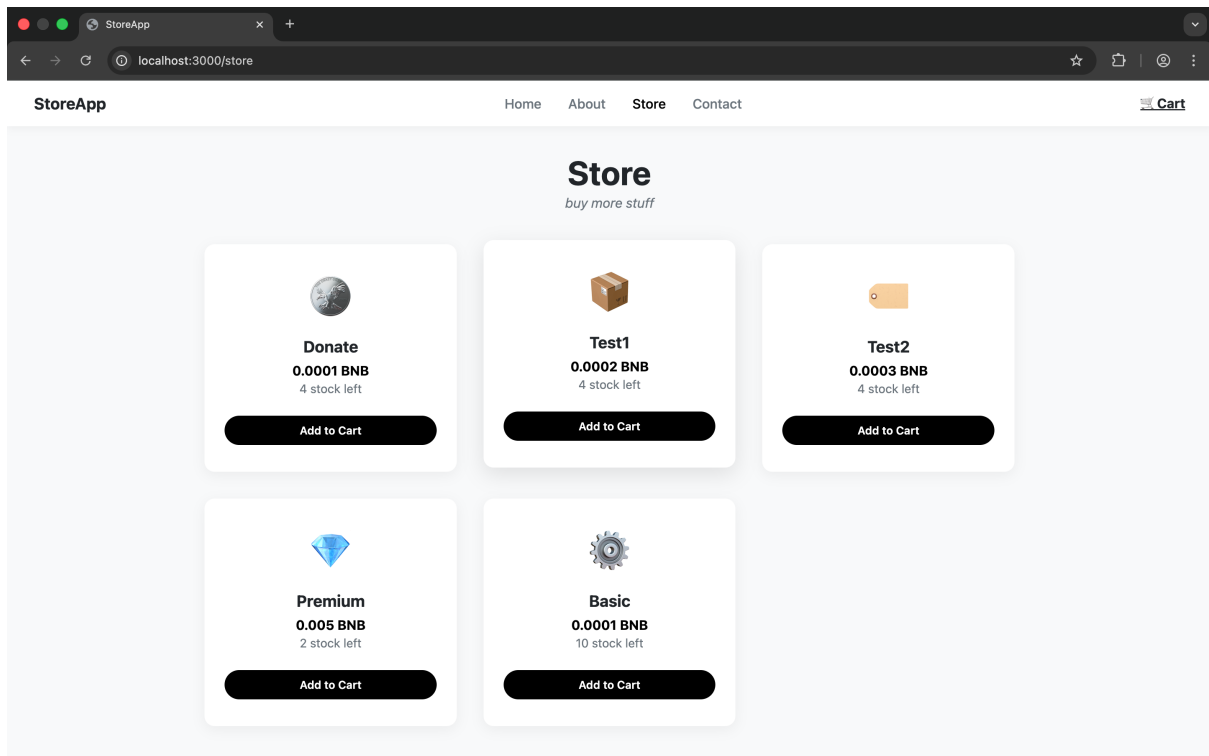

Figure 3. Store Page

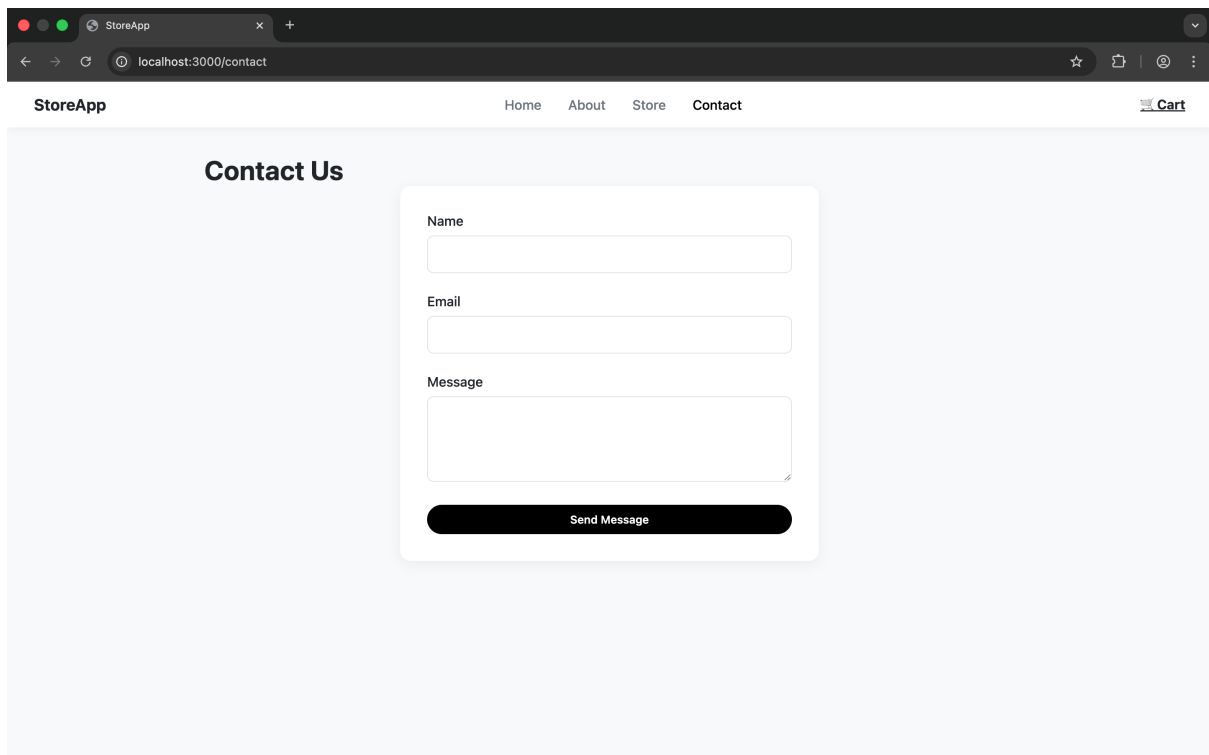

Figure 4. Contact Page

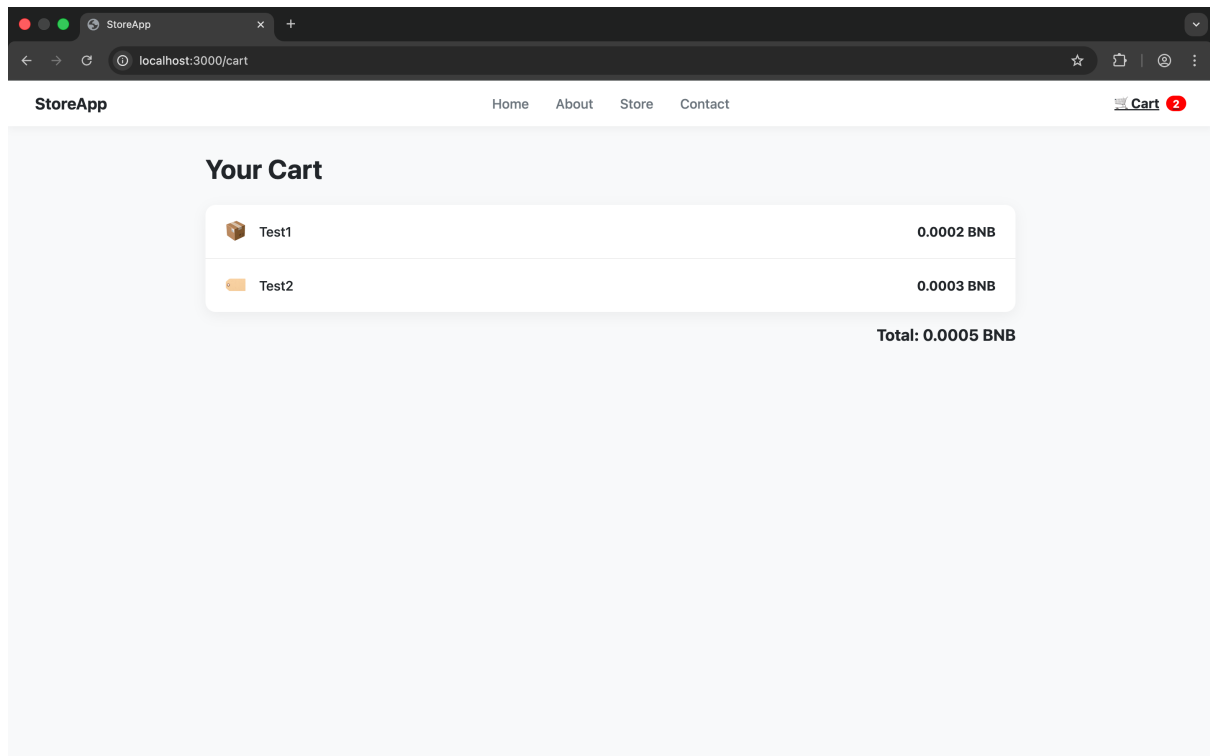

Figure 5. Cart Page

CONCLUSION:

In this lab, I learned how to implement routing in a React application using React Router, allowing smooth navigation between pages without reloading the browser. I also gained practical experience in creating and managing controlled forms using the `useState` hook, which helped me understand how to handle user input efficiently. While developing the store interface, I applied component-based architecture and improved my ability to structure a React application in a modular way. Overall, this lab strengthened my understanding of React fundamentals and gave me confidence in building interactive and user-friendly web applications.
